OSSP-SKILL-WEEK1

Session 1

Task1: To Install Linux VM, Configure GCC, Setup Git Repository, Create Project Structure, Understand Shell Architecture, Build Initial Make file.

Source code:

```
  GNU nano 7.2                    Makefile *
CC = gcc
CFLAGS = -Wall -Wextra

all: main

main: main.c
        $(CC) $(CFLAGS) main.c -o main

clean:
        rm -f main
```

```c
#include <stdio.h>

int main() {
    printf("Hello, OSSP Skill Week 1!\n");
    printf("GCC compilation is working successfully.\n");

    return 0;
}
```

Outputs:

```
make: Nothing to be done for 'all'.
root@LAPTOP-1COJKKG6:~/ossp_2520090049/skill/Week1/Task1# ./main
Hello, OSSP Skill Week 1!
GCC compilation is working successfully.
root@LAPTOP-1COJKKG6:~/ossp_2520090049/skill/Week1/Task1#
```

```
root@LAPTOP-1COJKKG6:~/ossp_2520090049/skill/Week1/Task1# nano main.c
root@LAPTOP-1COJKKG6:~/ossp_2520090049/skill/Week1/Task1# gcc main.c -o main
root@LAPTOP-1COJKKG6:~/ossp_2520090049/skill/Week1/Task1# ./main
Hello, OSSP Skill Week 1!
GCC compilation is working successfully.
root@LAPTOP-1COJKKG6:~/ossp_2520090049/skill/Week1/Task1#
```

Verifying linux environment by uname-a:

```
root@LAPTOP-1COJKKG6:~# uname -a
Linux LAPTOP-1COJKKG6 6.18.33.2-microsoft-standard-WSL2 #1 SMP PREEMPT_DYNAMIC Thu Jun 18 21:54:43 UTC 2026 x86_64 x86_6
4 x86_64 GNU/Linux
root@LAPTOP-1COJKKG6:~#
```

Checking GCC C compiler:

```
root@LAPTOP-1COJKKG6:~# gcc --version
gcc (Ubuntu 13.3.0-6ubuntu2~24.04.1) 13.3.0
Copyright (C) 2023 Free Software Foundation, Inc.
This is free software; see the source for copying conditions.  There is NO
warranty; not even for MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.

root@LAPTOP-1COJKKG6:~#
```

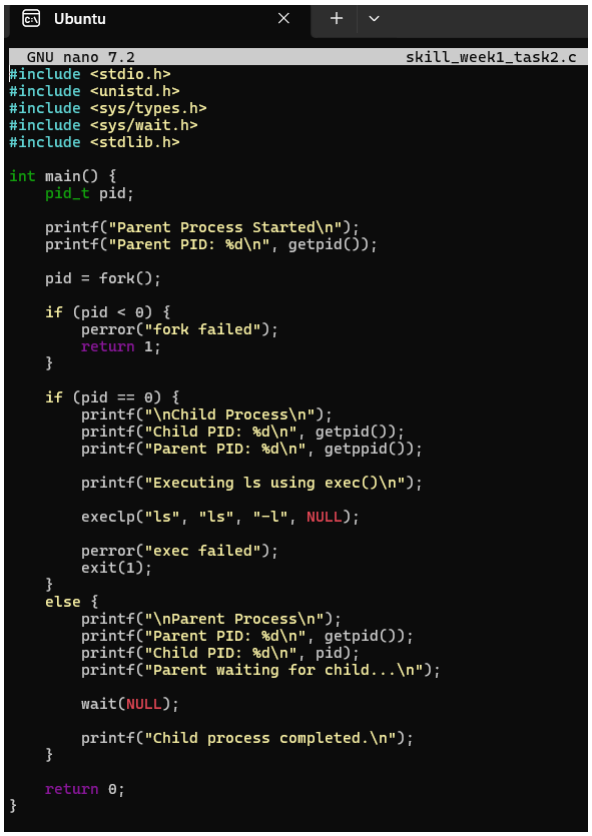
Git version:

Observation: I learned how to work with the Linux environment and verify system tools such as GCC and Git. I learned how to compile and execute a C program using GCC and understood the purpose of a Makefile for automating the compilation

process. I also learned how Linux development projects can be organized and built using standard compiler and build commands.

Task2: To Analyse process abstraction, execute fork(), understand exec() family, analyse parent-child relationships, inspect process tree, practice system call tracing.

Source code:



Output:

```
root@LAPTOP-1COJKKG6:~# gcc skill_week1_task2.c -o skill_week1_task2
root@LAPTOP-1COJKKG6:~# ./skill_week1_task2
Parent Process Started
Parent PID: 638

Parent Process
Parent PID: 638
Child PID: 639
Parent waiting for child...

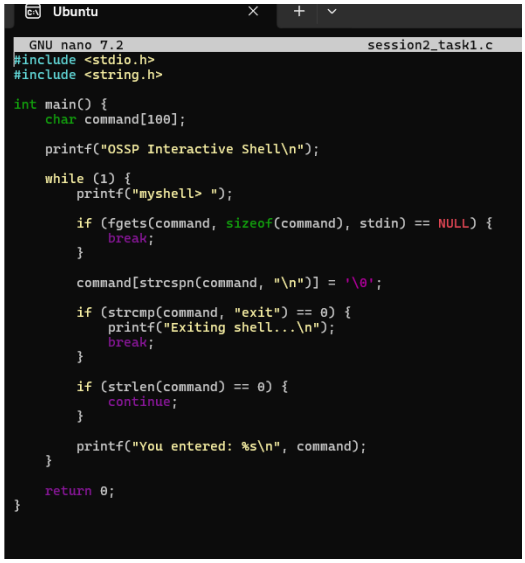
-rwxr-xr-x 1 root root 16304 Aug  8 03:26 week3pt1
-rw-r--r-- 1 root root  1023 Aug  8 03:26 week3pt1.c
-rwxr-xr-x 1 root root 16136 Aug  8 03:33 week3pt2
-rw-r--r-- 1 root root   376 Aug  8 03:32 week3pt2.c
Child process completed.
root@LAPTOP-1COJKKG6:~#
```

Observation: I learned how Linux creates and manages processes using fork(). I understood that exec() can replace the child process with another program, while wait() allows the parent process to wait until the child process finishes.

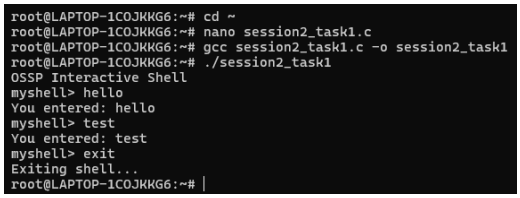
Session2

Task1: To Create Main Loop, Display Prompt, Read User Input, Handle Exit Conditions, Design Control Flow Diagram, Test Interactive Loop

Source code:



Output:



Observation: I learned how to create an interactive main loop in C that repeatedly displays a prompt and reads user input. I also learned how to handle exit conditions, manage input strings, and control program flow using loops and conditional statements.

Task2: To Capture Keyboard Input, Handle Backspace, Process Enter Key, Manage Input Buffer, Support Multi-Character Commands, Test User Interaction.

Source code:

```
  GNU nano 7.2
#include <stdio.h>

int main() {
    char buffer[100];
    int ch;
    int index = 0;

    printf("Type a command and press Enter:\n");
    printf("input> ");

    while ((ch = getchar()) != '\n' && ch != EOF) {
        if (ch == 127 || ch == 8) {
            if (index > 0) {
                index--;
            }
        } else if (index < 99) {
            buffer[index++] = ch;
        }
    }

    buffer[index] = '\0';

    printf("\nCommand entered: %s\n", buffer);
    printf("Characters stored: %d\n", index);

    return 0;
}
```

Output:

```
root@LAPTOP-1COJKKG6:~# cd ~
nano session2_task2.c
root@LAPTOP-1COJKKG6:~# gcc session2_task2.c -o session2_task2
root@LAPTOP-1COJKKG6:~# ./session2_task2
Type a command and press Enter:
input> hello world

Command entered: hello world
Characters stored: 11
root@LAPTOP-1COJKKG6:~#
```

Observed: .I learned how to capture keyboard input in C using getchar(). I understood how to manage an input buffer to store multiple characters, process the Enter key to finish input, and handle the Backspace key by removing the last character from the buffer. I also learned how user input can be processed and displayed as a complete command.
